Curriculum Connections: Linking Literature and Math

[Michelle Pasko](#)

Abstract

I feel that math should be an enjoyable, not a tedious and boring subject for students. One way to achieve this in a classroom is to make math more fun. Another useful strategy in teaching math is the use of mathematics in literature. Knowing that students love being read to, I have utilized story in order to increase motivation and interest. Recognizing the importance of the subject matter in order to increase understanding, I set out to explore the following question: What kinds of mathematical connections can be made to literature?

Author Biography

Michelle Pasko is a teacher in Anne Arundel County Public Schools. She did her undergraduate work at Towson State University and earned her Master of Arts in Instructional Systems Development with an emphasis in mathematics education from the University of Maryland, Baltimore County as part of the Capstone Seminar.
