Conference Title : Proceedings of the 55th Annual Convention of the American Association of Equine Practitioners, Las Vegas, Nevada, USA, 5-9 December 2009.

Abstract : In 70% of orthopedic (joint/collateral ligament) and 86% of soft tissue (suspensory ligament, superficial digital flexor tendon, and deep digital flexor tendon) injuries, treatment with bone marrow-derived mesenchymal stem cells (BMSCs) resulted in horses returning to function when follow-up information was collected an average of 21 months after treatment.

Record Number : 20103149409

Publisher : American Association of Equine Practitioners (AAEP)

Location of publication : Lexington

Country of publication : USA

Language of text : English

Language of summary : English

Indexing terms for this abstract:

Organism descriptor(s) : Equus, horses

Descriptor(s) : bone marrow, lesions, ligaments, muscular diseases, musculoskeletal system, soft tissues, stem cells, tendons

Identifier(s) : myopathy, skeletomuscular system

Broader term(s) : Equus, Equidae, Perissodactyla, mammals, vertebrates, Chordata, Eukaryotes
