Book Review

Proceedings of the Asia and Pacific Conference on Malaria: Practical considerations on malaria vaccines and clinical trials. April 21-27, 1985. Siddiqui, W. A., editor. Honolulu: Department of Tropical Medicine and Medical Microbiology, John A. Burns School of Medicine, University of Hawaii, 1986. [Dated 1985.] pp. xvi+ 666. Price and ISBN not stated.

The proceedings of this memorable conference, sponsored jointly by the University of Hawaii and the U.S. Agency for International Development, were published within a year, which alone deserves much praise. The conference brought together some 150 biomedical scientists and public health workers involved in research and control of malaria in Asia and the Pacific area of the globe. The handsome hard-bound volume contains not only the text of about 50 key papers, including reviews of the present status of malaria and its control in China, India, Indonesia, Malaysia, Papua New Guinea, Philippines, Thailand and the West Pacific; two-thirds of the book comprise

original reports by leading research workers concerned with the development of antimalarial vaccines and the planning of forthcoming field trials. Sporozoite vaccines, asexual erythrocytic vaccines, and gamete-related vaccines will be evaluated according to the five phases of such trials, ranging from experimental animals to large scale trials in endemic areas, and several papers deal with this subject. The proceedings contain also extensive verbatim discussions, summaries of round table meetings and detailed recommendations.

The book is excellently edited and printed. The organizers of the conference, the participants and the editor of this valuable volume deserve our sincere congratulations on their achievement.

L. J. BRUCE-CHWATT

[Editor's note: the reviewer was too modest to mention that the book includes his 'Ballad of the Plasmodium', on pp. 656-7.]
