Abstract : This book provides a compilation of the rich flora and fauna found in protected areas, Ramsar sites, and World Heritage sites. This document is divided into eight chapters. The first chapter presents the study background, objectives

methodology. The second chapter presents the location, biophysical and social aspects, and natural resources of economic significance of Nepal. Brief notes on relevant national acts, regulations and policies, international conventions and protected areas. The third chapter evaluates the biogeographical assessment focusing on biogeography, vegetation types, diversity at different altitudes, diversity. Reviews of the protected areas are presented in Chapter 4. The next chapters highlight the Ramsar sites and the World Heritage sites. Documentation of three areas includes basic observations and are arranged to reflect the background significance and achievements pertinent to biodiversity of individual sites. A summary of the findings of the earlier chapters is presented in the seventh chapter. Recommendations for consideration are presented in the final chapter. A total of 65 annexes with 65 sub-annexes are included on a CD-ROM.
