## Aeolian land forms in the Baruth Ice-Marginal Valley and the dune profile in the Picher Berge near Schöbendorf (Brandenburg, Germany)

Boer, Wierd Mathijs de

Mathematisch-Naturwissenschaftliche Fakultät II

Im Dünenprofil der Sandgrube in den 'Picher Bergen', südlich von Schöbendorf (Brandenburg, Deutschland, WGS84: 52°2.9070'N 13°25.8767'O), sind wenigstens fünf gut ausgebildete begrabene Böden zu erkennen. Nicht nur der obere, der

Jungdünenenteil, worin sich Feuersteinabschläge und bronzezeitliche Scherben befinden, sondern auch der untere, der Altdünenenteil, ist mehrfach gegliedert. Dabei ist an der Basis der Altdüne eine Verzahnung von Flugsand- und Sandlößschichten zu beobachten.

In the dune profile of the sand pit in the 'Picher Berge' south of Schöbendorf (Brandenburg, Germany, WGS84: 52°2.9070'N 13°25.8767'O), one can observe at least five well developed buried soils. Not only the uppermost part of the dune, the 'young dune' part, in which fragments of pottery of bronze age and flints were found, but also the 'old dune' part of the dune was subdivided several times by buried soils. At the basis of the 'old dune' part, loessy sands alternate with cover sand strata.
