 Pathology of tumours.Author(s) : [Willis, R. A.](#)Book : [Pathology of tumours.](#) 1960 No.3rd edit pp.xvi+ 1002 pp.

Abstract : The first edition of this book was reviewed in this Bulletin [*V. B.* 1960]. In this third edition, the whole work has been revised, with special attention to certain aspects, such as the experimental production of tumours, and to certain tumours. In usual the photographs and the list of references, all to works personally studied by the author, will be found invaluable aids. The text is not so restricted as the title suggests, as besides accounts of the macroscopic and histological features of tumours, there are discussions of other aspects of tumours, such as their frequency and species incidence, and of special aetiological factors that might be significant. The author is well known for his interest in the comparative aspects of tumours.

has himself studied a number of tumours from domesticated animals. Through this book, he directs the attention of his medical readers to important comparative studies and they should gain a well-founded appreciation of the significance of comparative oncological studies. It is true that, here and there, some statements appear to place stress on some animal tumours, and perhaps overemphasize the importance of them, but for details of the tumours of domesticated animals the reader will look elsewhere. All veterinary pathologists who have anything to do with the diagnosis of tumours should know, or will soon learn, that this is an indispensable work of reference.-E. C. (
