Abstract

This article presents an overview of research and development in accounting and financial management, with particular emphasis on the contribution of applied work for the hospitality industry. The findings indicate that, whilst there has been wide coverage of topic material comprising a number of notable developments, some of the research is inward looking, containing inadequate methodologies and superficial results, thereby contributing little to the generic body of knowledge in the discipline. However, with a more indepth approach to research and greater collaboration and cooperation among hospitality and other researchers the contribution to hospitality accounting and the broader accounting field could be significantly improved.
