 **Unbidden House Guests.**Author(s) : [HARTNACK, H.](#)Journal article : [Unbidden House Guests.](#) 1943 Vol.1 No.i, ii, iii, v pp.1-226; 1-62; 1

Abstract : This book, which deals in a popular manner with the plant and animal pests associated with houses, chiefly in the United States, includes much of the information contained in a previous one [*R.A.E.*, B 27 156], but its scope is wider and the information is considerably augmented; many of the copious illustrations also appeared in the previous volume. It includes notes on such pests as mosquitos, fleas and ticks and on such protozoa, bacteria, rickettsiae, viruses and worms of which insects are inter alia. It is in four parts, of which the last three deal with plants, invertebrates (including mites, but excluding insects, to which a subsequent volume will be devoted) and vertebrates, and contains notes on the appearance, habits and control of in

species. The first part includes information, illustrated to a large extent by r insects, on the climatic conditions in houses, the factors influencing the spre establishment of household pests throughout the world and the evidence v presence of many of them can be recognised. General methods of control : outlined, and the desirability of preventing infestation by constructional met stressed.
