Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death. Sixth Revision of the International Lists of Diseases and Causes of Death 1948.

Author(s) : [WORLD HEALTH ORGANIZATION.](#)

Journal article : [Bulletin of the World Health Organization](#) 1948 Vol.1 No.1 pp.xxx

Abstract : The old *International List of Causes of Death* amply proved its worth

great deal to bring order and clarity to national and international reporting. In time, of course, it has been necessary to revise the list, and the World Health Organization has now issued volume 1 of the sixth revision (adopted 1948). Volume 2 with an index, and has not yet been received.

The introduction contains a historical review of classification of disease, and of the methods adopted by the committee appointed to make the sixth revision. It contains a detailed list of 612 categories of disease, 153 categories of external causes, and 189 categories for characterization of injuries. This occupies pages 4 to 42, and is followed by a three-digit classification. It is followed by a much more comprehensive four-digit classification based on the same figures, but extended. This continues to page 321, and is followed by supplementary classifications, by instructions for medical certification and nomenclature, by rules for classification, by special tabulation lists (including lists of 150 and 500 conditions), by a suggested form of multiple-cause tabulation, and by the Regulations on Nomenclature adopted by the World Health Assembly.

In the introduction the purpose of a statistical classification is defined, it is "not a nomenclature of disabilities for compiling statistics and not a nomenclature of diseases and other words, not every condition receives a particular rubric or number, but a category to which every condition can be referred."

The *Manual* has evidently been prepared with great care, and in an accompanying report issued from Somerset House there is a short indication of the procedure by which the sections were submitted to practical tests on both sides of the Atlantic, and to the scrutiny of various committees.

Some of the sections in the list of infective and parasitic diseases, however, perhaps be amended when a new edition is produced. For instance, the old classification of leprosy into lepromatous leprosy, neuroleprosy and mixed, has now been replaced by international agreement, and the terms lepromatous, tuberculoid and undetermined have been adopted. The difference is more than a change of names. Under schistosomiasis the subdivisions vesical (*S. haematobium*), intestinal (*S. mansoni*), and pulmonary (*S. japonicum*) should be discarded in view of the fact that the syndrome of pulmonary infection are largely intestinal, and that the rare pulmonary manifestation is also caused by *S. mansoni*. The filarial diseases are not differentiated except onchocerciasis is mentioned separately, and infections with such diverse filarial parasites as *Wuchereria bancrofti*, *W. malayi*, *Loa loa* and *Acanthocheilium perstans* [formerly *perstans*] must all be placed together under filariasis. There are other minor sections which could be modified with advantage. *Charles Wikocks.*
