The effect of graphing calculator One

Anne Lawrence Hudock, Rowan College of New Jersey

Date Approved

5-31-1996

Embargo Period

9-4-2016

Document Type

Thesis

Degree Name

M.A. in Mathematics Education

Department

Science, Technology, Engineering, Arts and Math Education

College

College of Education

First Advisor

Sooy, John

Subject(s)

Graphic calculators; Mathematics--Study and teaching (Secor

Disciplines

Abstract

The purpose of this study was to compare the learning of basic geometry by students instructed with graphing calculators to those by traditional methods. Three chapters, covering the basic concepts of geometry, were taught to two separate algebra one classes at Rowan University in New Jersey over a nine-week period. The control group was taught using traditional instruction and the experimental group was taught using graphing calculator instruction.

A unit test was administered to both the experimental and control groups. At the conclusion of the study to evaluate student learning. From the two-tailed t-test, it was found that there was no significant difference between the two groups.
