Book : [Agriculture and structural transformation; economic strategies in late-developing countries](#) 1975 pp.495 pp.

Abstract : The analysis is directed at those longer-term alterations in economic structure which will transform the relationship between agricultural productivity and population increase. The main focus is on the reciprocal interactions between agricultural

development and the expansion of manufacturing and other non-farm sector conditioning factors are believed to be fundamental to an understanding of structural transformation in late-developing countries. The 1st of these is that of being late. The 2nd theme is that the development of agriculture can only be understood in the context of the interdependence between agriculture and other sectors of the economy. The final factor which is emphasized, concerns the size distribution of operational holdings and the type of agricultural technology on the pattern of rural development.
