Abstract

The first edition of this popular book explored new literacies, new kinds of knowledge and classroom practices in the context of the massive growth of electronic information and communication technologies. This timely new edition discusses a fresh range of practices like blogging, fanfiction, mobile/wireless communications, and fan practices that remix audio and visual texts. Revised and updated throughout, the book examines:

Popular practices and social networks associated with contemporary phenomena like Flickr and Wikipedia. Blogging, podcasting and mobile/wireless communication practices.

Writing practices within online fanfiction and manga-anime communities.

The production of Anime-Music-Video artifacts and online multimodal 'memes'.

The authors look at how digital technologies and new forms of mobile communications have been embraced by young people and integrated into their everyday lives. They argue that schools ignore some of these trends at their peril, and discuss how wireless mobility might be integrated effectively into school-based pedagogies and due attention paid to new literacies in teaching and learning. The new edition is essential reading for undergraduates and academics within literacy studies and for policy writers working within the area of digital literacy, new technologies or ICT development within education.

Item ID:	1795
Item Type:	Book (Research - A1)
Keywords:	new literacies, weblogging, mediacasting, classroom learning
