Book : [The politics of health in India](#) 1988 pp.359 pp. ref.p. 303-329

**Abstract :** This book outlines the patterns of health provision and the development of health services in India since 1947. The first part sketches the development of health policy under British rule. The second part deals with post-independence policy in the social, political and economic context, taking health expenditure, policy with health personnel, foreign assistance, medical migration and pharmaceutical studies for detailed attention. It is concluded that health services in India are geared to health needs that are those of many other developing countries. Health planners have been supported by international agencies in preventive cam

for paramedical workers and improved water supply and sanitation. Reform have continued this tradition, but the limitations and the constraints on the the reforms, suggest that the health system will remain less adequate than Some policy implications are drawn and some prospects are outlined.
