Biology of insect eggs. Volume I, Volume II, Volume III

Author(s) : [Hinton, H. E.](#)

Book : [Biology of insect eggs. Volume I, Volume II, Volume III.](#) 1981 pp.xxiv+1-473+xvii+779-1125 ref.many

Abstract : This 3-volume work on the biology of insect eggs was at the ear at the time of the death of the author, and the final stages of publication were by colleagues. It is the first comprehensive account of all aspects of the insect (excluding embryology, since this has been reviewed elsewhere). The work is illustrated with line-drawings and electron micrographs. The first volume contains chapters on aspects of general interest, including egg morphology, enemies

defence mechanisms, parental care of eggs and techniques for obtaining all their eggs. In the second volume, the insect orders are considered in separate parts and their eggs are described and discussed in detail. The third volume contains about 220 pages, a species index, an index to the authors mentioned in the first subject index and a list of the publications of H. E. Hinton between 1930 and 1952.
