Fixed prosthodontics is the science, art and technique of restoring, reconstruction and lost teeth. Restorations in this field of dentistry can be the finest service rendered disservice and damage in dental medicine in general.

Ever since 1987, and the first edition of «The fundamentals of tooth preparations» «Fundamentals of fixed prosthodontics» the author Herbert T Shillingburg Jr. with his significant authority in the field of fixed prosthodontics whose work became the first basic knowledge in fixed prosthodontic therapy for generations of students. The fourth fixed prosthodontics» is not less revolutionary than the first one due to equally fresh but also because of keeping in touch with emerging new methods, materials and technology, unstoppable research and development of dental industry.

With classic, but significantly refreshed, chapters on tooth preparations for various conditions, dental tissue state, health and condition of supporting structures, chapters on impressions including optical impressions, there can be found elaborate chapters on occlusion, in esthetic characteristics of various crowns and bridges, full ceramic crowns and bridges and Chapter on cements and fixation techniques include up-to-date knowledge and a Bonus of this fourth edition are chapters on implant-prosthodontic therapy, i.e. planning of implant-supported crowns and bridges, which in combination with surgical and para represent overall scope of dental implant-prosthodontics.

Basic dental laboratory procedures in fabrication of various crowns and bridges are also The fourth edition of «Fundamentals of fixed prosthodontics» by Shillingburg et al. is and academic experience, teaching, research and critical analysis of relevant up-to-date a solid introduction in the field of fixed prosthodontics for students and young practitioners seasoned professionals. Basic and most important liability and downside is a complete visual presentations solely on schematic drawings.
