### Abstract

We give a proof, in a stronger form, of a conjecture proposed by A. Gleason. Assume  $D$  is a strongly pseudoconvex domain  $D \hat{\subset} \mathbb{C}^2$  with smooth boundary and let  $h: D \hat{\rightarrow} \mathbb{C}$  be any function continuous in  $D \hat{\bar{D}}$ , and holomorphic in  $D$ . Assume further that  $(a, b) \in \mu D$ ,  $h(a, b) = 0$ . Then

$$(\hat{\alpha} \rightarrow) h(z_1, z_2) = (z_1 \hat{\alpha}'' a) h_1(z_1, z_2) + (z_2 \hat{\alpha}'' b) h_2(z_1, z_2)$$

, where  $h_1$  and  $h_2$  are continuous in  $D \hat{\bar{D}}$ , and holomorphic in  $D$ . In addition we prove that if  $h$  satisfies certain Hörmander conditions at some points in  $\hat{\alpha} \hat{D}$ , then one can obtain  $h_1$  and  $h_2$ , which also satisfy those Hörmander conditions at the same points (Theorem 1).

Our proof relies on a vanishing cohomology theorem which we prove using a recent
