Remarkable agaves and cacti.

Author(s) : [Nobel, P. S.](#)

Author Affiliation : University of California, Los Angeles, CA 90032, USA.

Book : [Remarkable agaves and cacti](#). 1994 pp.x + 166 pp. + 4 pp. of col. pl. betw
and 87

Abstract : For at least 9000 years, agaves and cacti have been cultivated by people all over the world, for a multitude of purposes, including as ornamentals, as vegetable fruits, for fibre, for cattle feed, for medicines, for hallucinogens used in religious ceremonies, for beverages (e.g. tequila). This book, which is aimed at anyone from amateur and succulent enthusiasts to researchers and professionals, explores some of these uses and also deals at length with the biology, particularly the physiology, of these plants (there are chapters on root water uptake, the influence of environmental factors on growth, etc.).

light and temperature on the shoot, CO₂ uptake, and plant productivity and affecting it). The final chapter discusses the future prospects for the production of agaves and cacti and their conservation in the wild.

Indexing terms for this abstract:

Organism descriptor(s) : Agave, Cactaceae, plants

Descriptor(s) : beverages, carbon dioxide, conservation, environmental factors, feeds, fibre plants, foods, fruits, hallucinogenic properties, hallucinogens, light, medicinal plants, ornamental plants, photosynthesis, plant genetic resources, plant physiology, plant relations, temperature, vegetables

Identifier(s) : carbon assimilation, carbon dioxide fixation, drinks, drug plants, fiber plants, fibre crops, medicinal herbs, officinal plants, ornamentals, vegetable

Broader term(s) : Asparagaceae, Asparagales, monocotyledons, angiosperms, Sauriales, plants, eukaryotes, Caryophyllales, eudicots
