Abstract

This edition has been replaced by a [new edition](#) and is no longer available for purchase.

Japanese ranks as the sixth language of the world with more than 125 million speakers in the island state of Japan, a topic of heated discussion, but Altaic and Austronesian languages appear to have contributed to the early form: a long written tradition, which goes back to texts from the eighth century AD. The modern writing system employs characters and two sets of syllabary developed from the Chinese characters. This book consists of fourteen chapters on morphology, the writing system, grammatical constructions, and discourse and pragmatic phenomena of Japanese with a useful typological reference and students of Japanese with a theory-neutral introduction to current linguistics.
