ABSTRACT

This research explored ecodymy in mission and gave a brief overview of the ecological dimension of: terms of the polarity between creation and end times, or a creation-centred and a redemption-centred approaches were described by focusing on two themes found in the works of missiologist and ecumer (*The Accra Confession, The Cape Town Commitment, and Together towards life - Mission and evangelism* the reorientation towards creation and the re-imagination of the eschaton. In terms of the reorientatio research found that current developments in missiology reflect a major interest in the importance of e clear understanding that the Gospel is good news for all of creation, and demand justice towards the v

affirmed that God's mission is inherently creational and world-affirming. In terms of the re-imaginative research found that the new life promised by the gospel is life in fullness, and includes the whole *oikos* already present in the reign of the risen Christ in his kingdom, structures and informs the life-giving mission.

Introduction

Pope Francis issued an important environmental encyclical - *Laudato Si'* - on care for the creation on 18 June 2015). The encyclical is addressed to the people of the world and the pope invites the people to urgent action on the crisis 'about our common home' (Francis 2015:5). He (Francis 2015) pointed out that:

The urgent challenge to protect our common home includes a concern to bring the whole human family to seek a sustainable and integral development, for we know that things can change. (p. 4)

This immense and urgent challenge (Francis 2015:5) added another important voice to recent important documents and statements, and a missiological discourse that was already voiced by David Bosch (1995) in his publications, *Believing in the future*, where he identified 'ecological damage' (Bosch 1995:3) as one of the major challenges of the First World. He defines mission as alerting people to the universal reign of God (Bosch 1995:33). The challenge is to invite people to articulate an answer to the question: 'What do we have to become Christians *for*?' - to which the answer is: 'In order to be enlisted into God's ministry of reconciliation, peace and justice on earth' (Bosch 1995:33). His argument, includes paying attention to the ecological damage brought about by Western subjugation of nature (Bosch 1995:55). Most importantly, and in a manner that reminds us of Bosch's emerging paradigm of mission as espoused in *Transforming Mission* (Bosch 1991), he identifies a number of elements of a missiological culture. The very first element is an *ecological dimension*, because the time is long past to exclude the ecological dimension from the missiological agenda.

This research explores *ecodomy in mission*, the growing attention to earthkeeping and life in fullness in the concept *ecodomy* can be understood in terms of *Laudato Si'* as care for our common home, and refers to the integral development of the whole of creation, as well as the development of an integral ecology. It focuses on the 'celebration of creation and fruitfulness overflowing from the love of God', and the 'restoration of creation' (Keum2013:37). In terms of the policy document of the World Council of Churches (WCC), life in fullness is that which is allied with the renewal of the natural world and justice in the economy (Keum 2013:46). It is related to the issue of climate change, and shares Francis' (2015:7) conviction that the climate is a common good, because it is for all. At a global level, climate refers to the complex system linked to many of the essential conditions for life. *Ecodomy* is broader than climate, but includes the term. The term 'ecodomy' is closely related to *oikos* [house or dwelling] and a term integrally linked with mission], *oikein* [to inhabit] and *oikia* [house or dwelling] (Conradie 2006:268).

This research will be done within the framework of investigating the attention to ecological matters, especially the tension between 'creation' and 'end times', in three important recent missiological ecumenical documents: *Global Mission* (2004), *The Cape Town Commitment* (2010), and *Together towards life - Mission and evangelism in the 21st century* (2013) of the WCC (Keum 2013). The framework is constructed keeping in mind Bevans (1992:16) distinction between two theological orientations in the contextualisation of theology - a creation-centred and a redemption-centred approach, the world is seen as sacramental and a place where God reveals himself. This research takes a creation-centred approach views culture and human experience as in need of transformation, or even total replacement. It maintains a tension between both approaches alive, and tries to postulate an approach where keeping both in creative tension. It offers opportunities to re-imagine missiology (see also Conradie 2006:268) and to place *ecodomy*. It can be understood in terms of Kritzinger and Saayman's (2011:150-151) description of Bosch's approach as a synthetic model that keeps a number of elements in creative tension.

This will be done in a manner that reminds us of Bosch's open-ended, multi-dimensional approach to mission (Bosch 2011:34), namely that there are a number of paradigms operating in missiology. Although Bosch did not

earthkeeping in *Transforming Mission*, missiologists such as Bevans and Schroeder (2004) added a cor of creation as one of the components of missiology.

An important clue to the approach followed in this article can be found in turning the concept of 'incul Taking the *missio Dei* seriously is to start with the incarnation of Christ (see also Hastings 2012:loc.180 Christ was a moment of 'increation': he became flesh. The sending of God is a sending to the world, to DeWitt (2008) says:

The Word incarnate, expressing God's profound love for the world (Jn 3:16-17) comes liturgical sanctuary and the Holy Eucharist, moves into creation to open the shackles of enslaved people breaks the chains of sin, oppression, degradation, and bondage, and renews the life of the earth hope of the world. (p. 92)

God's mission encompasses the cosmos; therefore Christian mission includes all of God's created or Missiology must assist theology to discern the visceral reality of our material world and our part in it.' focus of a missional church must be creation bound, for the true missional church will be an organic o (Niemandt 2011:73).

Reorientation towards creation

For many years, mission was understood as the actions of the church that began with the events durin outpouring of the Spirit and the establishment of the church. In a certain sense, the famous threefold g formulated by Gisbertus Voetius, namely: the conversion of Gentiles, the planting of the church, and th manifestation of God's grace (Kritzinger, Meiring & Saayman 1994:1), captured the imagination of mis for centuries. Much of this can be seen in definitions of mission, such as the strong focus of, for examp movement, on evangelism. Evangelism is described as primary in the church's mission of sacrificial s 'holistic approach' that developed later, with its focus on *kerugma*, *diakonia*, *koinonia* and *leitourgia* (K 39), failed to include an orientation towards the creation event and ecodomy. It is a pity that Kritzinger develop his plea that 'missionaries should become involved with environmentalists in the salvation c works on mission. Skreslet' s (2012) important work on the history of missiology also has very scant re importance of 'eco-theology', with nothing but a brief reference to the spiritual legacy of St. Francis an for God's creation (Skreslet2012:loc.4055). Although Skreslet (2012:loc.388) defines missiology as 'the aspects of mission', and although he is very clear on the importance of conducting the study of missio methodologies, he does not include 'eco-theology', earthkeeping or 'ecodomy' in his 'themes in miss Schroeder (2004:375), in their very comprehensive and important theology of mission, also acknowlec of the integrity of creation has not received much attention in the church's mission.

But, in recent years, missiology and the understanding of mission have moved completely away from with the point of departure now being the understanding that God's mission includes the whole of cre God is doing in his great purpose for the whole of creation', and all that he calls his people 'to do in cc purpose' (Wright 2010:24). The church's mission is to participate in God's mission to restore the whol human life. The scope of salvation is as broad as creation, and this must also be evident in missiology

It is important here to appreciate the departure made from earlier concepts of mission by Johannes H missionary conference in Willingen, two *foci* can be observed (Van Gelder & Zscheile 2011:30): 'redem through the church's role as the principle channel by which God's redemption occurs in the world, an broader perspective of God's desire to continue to care for his creation. Hoekendijk (1950:168) was co overemphasis on church growth, and argued that mission focused only on the church stands in juxtap focused on the kingdom of God. He argued that the world, not the church, is the core of God's mission never the subject of mission - at most it is a partner in the *missio Dei* (see also Flett 2010:44). This lead theology', where the church is perceived primarily in its relationship with the world. The gospel and th together, in the sense that God continues to struggle for the sake of the world (Flett 2010:52). For Hoek was the guiding principle - it describes the true objective of the church's work in the present (see also

Skreslet (2012:loc.1655) argues for Hoekendijk's approach and says that *shalom* stands not only for the an ideal social order, but also for God's desire that peace and harmony be restored throughout creation.

Reference to a number of missiologists will illustrate this important shift in missiology. Although the list is not comprehensive, they still serve to show the emergence of a new theme in missiology.

Reference has been made to the remarks of Bosch. Although the issue of ecology did not surface in *Truth and Reconciliation*, the very first issue mentioned in *Believing in the future* (Bosch 1995). This recognition of the insight that the mission includes creation was, up to then (with the exception of Hoekendijk's broad apostolate theology) one of the essential components of most mainstream missiologies.²

In *Constants in context*, Bevans and Schroeder (2004:348) acknowledge the influence of Bosch and the *Transforming mission*, but endeavour to go beyond Bosch. They also use a multi-dimensional approach to synthesise mission as prophetic dialogue. They then proceed to formulate six dimensions of mission: 'essential components of God's mission in which the church is called to share' (Bevans & Schroeder 2004:349).

- witness and proclamation
- liturgy, prayer, and contemplation
- justice, peace, and the integrity of creation
- inter-religious dialogue
- inculturation
- reconciliation.

Bevans and Schroeder (2004:376) state that mission witnesses to, proclaims, celebrates, and works for the well-being of all about and seeing human beings, earth's creatures, and the created universe itself. Ecological justice entails a lifestyle that uses fewer of the world's resources, church support for legislation that enhances the sustainable environment, the development of organic farming, and the protection of wildlife areas. These kinds of prophetic living, prophetic speech and prophetic action. The point is that gospel salvation includes the well-being of all of creation (Bevans & Schroeder 2004:377). In a later publication (*Prophetic dialogue: mission today*), Bevans and Schroeder (2011:67) say that responsibility towards the earth is a crucial part of the mission.

The work of Walls and Ross (2008) is also important here, because it represents a migration away from the influences on missiology, to a new landscape of global mission (Walls & Ross 2008:xii). They describe mission, in conversation with Bevans and Schroeder's (2004) *Constants*, of the Christian faith. They mention teaching, loving service, and the transformation of unjust structures in society, but also include 'to strive for the integrity of creation and to sustain and renew the life of the earth' (Walls & Ross 2008:84). One must not lose sight of the focus on the 'life of the earth', as this theme of life emerges later in ecumenical documents as well. In the work, edited by Walls and Ross, DeWitt (2008:85) takes great care to describe the '*oikoumene*' of Orthodox theology, theology is defined as the study and examination of the whole work of Divine Providence over the world until the last times - realised by the church within history and time. He formulates (DeWitt 2008:85) the principles for the stewardship of creation:

- The conservancy principle: We should return the service of creation to us with service of our own.
- The safeguarding principle: We should safeguard the Lord's creation as the Lord safeguards us.
- The fruitfulness principle: We should enjoy the fruit of creation, but not destroy its fruitfulness.
- The Sabbath principle: We should provide for creation's Sabbath rest with no relentless pressure.

Christopher J.H. Wright can be seen as a representative of evangelical missiologists, as he played an important role in the development of the missiology of the church in the 21st century.

III in Cape Town in 2010. He (Wright2010:49) states that God will hold us accountable for our humanity in Christianity. This has a profound impact on the understanding of mission, as both the creation and redemption of the Triune God is part and parcel of God's gospel at work in history and creation. In *The mission of God* (Wright 2006:403) states that the whole earth is the field of God's mission. When Wright (2010:112) answers the question of the mission of God's people is, he says that at least part of the answer is that the people of God must be engaged in the liberation of all creation and humanity from every form of oppression and slavery. Environmental action is a legitimate and integral dimension of biblical mission. He (Wright 2010:112) concludes: 'As Christians we are doubly bound to see active care for creation as a fundamental part of what it means to love and worship God.'

The importance of creation and 'ecodomy' can be seen in his statement (Wright 2010):

Creation is not just the disposable backdrop to the lives of human creatures who were really in some other place somewhere else, and some day will do so. We are not redeemed out of creation, but as part of the creation itself - a creation that will again be fully and eternally for God's glory, for our joy and blessing. (p. 56)

Wright (2010:267) says that ecologically responsible behaviour is an integral facet of the church's mission and discipleship.

Timothy C. Tennent is another important evangelical voice. He (Tennent 2010:loc.1914) argues that the Bible is framed by God's creation of the heavens and the earth (Gn 1), and the account of the new heaven and new earth. This implies that all of human history and culture and engagement with nature (today we can say all of it) is within the parameters of God's creative and sustaining acts. Central to Tennent's (2010:loc.1930) understanding of *Dei* is that God has taken the initiative to act on behalf of the redemption of the entire world (Tennent 2010:loc.1930). The ultimate purpose of the Triune God is to draw the entire cosmos into communion with God's divine life.

Ecological mission in ecumenism

There is a rapid, significant and often spontaneous movement towards ecological mission around the world (Wright 2008:97). This can be seen in the main Christian tradition, and is especially clear in the ecumenical movement. The minutes of ecumenical meetings since 2004 shows the unequivocal commitment to ecological justice issues. The document adopted by the delegates of the World Alliance of Reformed Churches' (WARC 2004) 24th General Conference recognises that:

... current economic doctrines, with the traditional Reformed criticism of idols (i.e., Mammon, consumerism, financial and speculative markets), deny God's life-giving sovereignty and defy God's covenant with the poor, the vulnerable, and the whole of Creation from the fullness of life. (p. 3)

As an introduction to the eventual adopted confession, the document speaks about 'reading the signs of the times' (WARC 2004)³:

... have heard that creation continues to groan, in bondage, waiting for its liberation (Rm 8:22). We are moved by the cries of the people who suffer and by the woundedness of creation itself. We see a dramatic link between the suffering of the people and the damage done to the rest of creation. (p. 1)

In one of the plenary sessions of the Cape Town 2010 meeting of the Lausanne Movement, Newman stated that all believers in a Creator and a Redeemer God, and hence have 'a great responsibility to act on God's behalf' (Laferton 2010:1). The concept of 'integral mission' assisted the Lausanne movement to progress to a new understanding of mission. In the *Cape Town Commitment*, it is stated that (Lausanne III 2011):

Integral mission means discerning, proclaiming, and living out the Biblical truth that the gospel is good news, through the cross and resurrection of Jesus Christ, for individual persons, and for society. All three are broken and suffering because of sin; all three are included in the redeeming love of God. All three must be part of the comprehensive mission of God's people. (p. 13)

The design of the declaration consists of a number of issues demanding the love of God's people (i.e.:

we love God's Word, we love the gospel of God, and we love the people of God). Lausanne III clearly : world of God's creation. This love is not sentimental affection for nature, but is described as the logical for God by caring for what belongs to him' (Lausanne III 2011:13). As is further explained in the docun

This must be done in a way that cares for the earth and all its creatures, because the earth belongs the sake of Jesus Christ who is the Creator, Owner, Sustainer, Redeemer, and Heir of all creation

Lausanne III warns against the 'toxic idolatry of consumerism', and calls on Christians to repent their waste and pollution of the earth's resources. In the summary of commitments, the document (Lausan

We commit ourselves to the integral and dynamic exercise of all dimensions of mission to which Church. God commands us to reflect his own character through compassionate care for the need demonstrate the values and the power of the kingdom of God in striving for justice and peace a God's creation. (p. 20)

In the discussion of God's peace, Lausanne III (2011:29) describes Christ's peace for his suffering crea over the widespread abuse and destruction of the earth's resources, including its bio-diversity, and id the most serious challenge.

The 10th Assembly of the WCC (Keum 2013) received a new mission affirmation: *Together towards life: in changing landscapes* (TTL). This affirmation was unanimously approved by the WCC Central Comm Greece, on 05 September 2012. The mission affirmation is set in the context of God's creation and the v clear emphasis on the broad issue of 'life'. The affirmation (Keum 2013) states:

Rather the gospel is the good news for every part of creation and every aspect of our life and so therefore, vital to recognize God's mission in a cosmic sense, and to affirm all life, the whole *oikou* interconnected in God's web of life. (p. 5)

It is significant to note that mission is understood as being all about the flourishing of creation (Keum called on churches to move beyond a narrowly human-centred approach and to focus on the reconcil created life. This affirmation presented an interesting understanding of the *missio Dei*: participation in understood as participation in communion with all of creation (Keum 2013:38).

In the conclusion of TTL, the document states a number of affirmations that summarise the whole doc of ecological justice issues is evident in the following affirmations (Keum 2013:37-40):

- 'We affirm that mission begins with God's act of creation and continues in re-creation ...'
- 'We affirm that the mission of God's Spirit is to renew the whole creation'.
- 'Mission, then, is to denounce the economy of greed and to participate in and practice the divi love, sharing and justice'.
- In the affirmation on mission movements from the global south and east, it is stated that 'our should show solidarity with suffering peoples and harmony with nature'.

In the final affirmations, the document clearly stated that '[m]ission has creation at its heart' (Keum 20 labels TTL as a creation-centred missiology, and says: 'Mission, therefore, is to turn to God in creation

TTL also has a whole section on the theme of 'Mission and the flourishing of creation' (Keum 2013:9-1 the relation between the missionary God, the creation of life, and the church's calling to participate in It states clearly that mission begins with the act of creation, and calls on the church to embrace forms c our reconciled relationship with all created life. In practical terms, TTL calls on churches to campaign : sustainable lifestyles, and the development of spiritualities that are respectful of the earth.

When one evaluates the TTL document, it is immediately apparent that it does have a very clear focus creation and life in all its fullness. The scope and intention of the TTL document can be seen in the for

introduction of the theme (Keum 2013):

We believe in the Triune God who is the Creator, Redeemer, and Sustainer of all life. God creates *oikoumene* in God's image and constantly works in the world to affirm and safeguard life. (p. 4)

Our conference theme of life in its fullness is also emphasised in the very next statement (Keum 2013)

God invites us into the life-giving mission of the Triune God and empowers us to bear witness to the v all in the new heaven and earth. (p. 4)

Later on it says that 'the church is commissioned to celebrate life, and to resist and transform all life-d 2013:4). 'The mission of the church is to prepare the banquet and to invite all people to the feast of life Mission is undergirded by a transformative spirituality, and this kind of mission spirituality must not God's economy of life (Keum 2013:13). TTL does have a very strong pneumatological orientation, and this life-giving mission of God is explained as (Keum 2013:4): 'Life in the Holy Spirit is the essence of r we do what we do and how we live our lives'.

It should also be noted that another policy document, tabled at the WCC in 2013, The Church (TC), also mission (WCC 2013):

The Church, as the body of Christ, acts by the power of the Holy Spirit, to continue this life-givir prophetic and compassionate ministry and so participates in God's work of healing a broken w

The understanding of the Church and its mission is rooted in God's great design for the *oikoumene* - tl creation. The church is on a life-giving mission and so 'participates in God's work of healing a broken

Noort (2013:194) is correct in his observation that 'the emphasis on life-affirming mission is of crucial mission statement claims that the Spirit of God is at work where life is affirmed and blossoms. As such a criterion to be able to distinguish between the spirits of this world and the Spirit of God, serving as a where God's Spirit is at work. The affirmation thereby also establishes a theological bridge between th worldviews, indigenous religions and wisdom traditions, for - because the gospel is good news for all recognise God's mission in a cosmic sense and to affirm all life, the whole *oikoumene*, as being intercc life (Keum 2013:5). This also represents an important point of critique on TTL: the hermeneutical key, work where life is affirmed and blossoms, begs the question of how this is reconciled with the classica Spirit always points towards Jesus the Christ (see e.g. the Lausanne Movement and the Cape Town 20 III 2011:10).

Summation

Kritzinger (2011:47) refers to a seminar held at UNISA, where Roger Schroeder explained their underst dialogue'. *Prophetic* corresponds with the *already* of the reign of God, and *dialogue* with the *not yet*. The towards the creation, and prophetic mission calls on the people of God to act as caretakers of God's cr orientates towards the *not yet*, and brings God's preferred future into the discussion.

Concluding the discussion of ecological justice issues then, the issues tabled and decisions made clea in the importance of ecological issues, offer a clear understanding that the Gospel is good news for all justice towards the whole *oikoumene*. It affirms that God's mission is inherently creational and world- by the church as a sign of a new humanity and servant in the kingdom of God, for the recreation of the 2012:loc.306).

Re-imagination of the eschaton

The incarnation of Christ is very important as a moment of 'increation'. It has already been mentione is a sending to the world, and to the totality of creation. It is equally important to see the incarnation a

eschaton. In the incarnation, the new creation breaks into the present order (Tennent2010:2001). This is a world with a profound kind of physicality - in the words of N.T. Wright (2006:75): a world 'which will be solid, more utterly real, a whole in which the physical reality will wear its deepest meaning on its face' Wright (2014) says:

Jesus is not far away; he is in heaven, and heaven is not a place in the sky, but rather God's dimension which we think of as ordinary reality. (p. 96)

In this section, the focus will be on the other side of the creation-*eschaton* polarity, namely the *eschatology* and 'eco-theology' from the focus on these issues in terms of a missiological understanding of the implications of God's mission as the remaking of his creation of space, time and matter as a new creation through the resurrection of Jesus Christ.

In his multi-dimensional approach to mission, Bosch (1991:498) described mission as 'action in hope' rather than the recovery of eschatology, but then not in the way of the extreme eschatologisation of mission, as found in the pessimism (Bosch 1991:504) of Protestant orthodoxy, Pietism and, can I add, Pentecostalism. Mission is oriented to the here and now. There is an intrinsic relationship between hope and eschatology, the kingdom and reign of God. One of the implications of linking hope to eschatology and the kingdom highlights the difference between eschatology and teleology. Teleology assumes the steady progress towards a purpose. Eschatology brings together the past and future into the present in a new creation. In this 'action' it is important to ask about the Christian's involvement in the world rather than seeking to know God's future (Tennent 2011:78).

Robinson (1991:151) argued the case to understand salvation as the restoration of all mankind's relationship to nature. The perspective of God's present and future kingdom gives focus to the church (Robinson 1991:151): 'Mission is this new community in the service of God's salvic purpose for all of creation.'

Bevans and Schroeder (2004:377) emphasised that an ecological consciousness in mission stretches to include the well-being of all of creation. This commitment to human and cosmic welfare has an eschatological dimension which is both already being realised and yet to reach its fulfilment (Bevans & Schroeder 2004:378). The future integrity of God's creation, is what we make of it now.

C.J.H. Wright (2006) pays considerable attention to the importance of 'mission and God's earth' in his work. He uses the concept of the 'fullness of the earth' and describes it as a feature of the creation narrative (C.J.H. Wright 2006:106). It is a way of talking about the whole rich abundance of created order. Wright bases the imperative to care for creation on a strong doctrine of creation. However, 'you cannot drive a car looking only in the rear-view mirror' (C.J.H. Wright 2006:106) must thus also value the earth in terms of its ultimate destiny. We need an eschatological foundation to our mission - as such, a biblical hope adds an important dimension to our ecological mission.

Tennent (2010:loc.5611) pays considerable attention to the issue of the 'new creation' in missiology, a reconnection of our understanding of mission with the larger context of the in-breaking of God's new creation. He is about extending the claims and realities of the New Creation into the present order' (Tennent2010:loc.5448) calls missionaries 'heralds of the New Creation', announcing and embodying the in-breaking realities of God's rule in the midst of a fallen world. Precisely because we are heralds of a kingdom that is not yet fully consummated, we live in the constant tension between the *already* and the *not yet* of God's new creation.

Wright (2014:106) affirms that, in the new creation, the ancient human mandate to look after the garden is reaffirmed. God's kingdom will come on earth through an almost evolutionary process, 'or at least until the present world attains the result God ultimately intends' (Wright 2014:84). In Wright's eschatology, however, heaven is not a place in the sky, but rather God's dimension of what we think of as ordinary reality. God's people must be 'new-creation people here and now, giving birth to signs and symbols of the kingdom of heaven' (Wright 2014:106) - God's agents participating in God's mission in the renewal of the present. Why Christians should have a passion for ecological work, for putting the world to rights insofar as we have denied, 'either the goodness of creation or the power of God in the resurrection and the Spirit, and quality of life' (Wright 2014:94) are denied.

Eschaton in ecumenism

One of the research goals was to establish whether an eschatological orientation to ecology and 'eco-identified in *The Accra Confession* (2004), the Cape Town Commitment (2010) and TTL (2013).

As has been previously stated, *The Accra Confession* (2004) was the result of a 15-year process 'in recognition of the urgency of global economic injustice and ecological destruction'. As a part of the confession, much time was spent on the current situation the world finds itself in, then described as (WARC 2004):

Resource-driven wars claim the lives of millions, while millions more die of preventable diseases such as AIDS global pandemic afflicts life in all parts of the world [...] The policy of unlimited growth and industrialized countries and the drive for profit of transnational corporations have plundered the earth and severely damaged the environment [...] Life forms and cultural knowledge are being patented and controlled (p. 1)

Their answer (WARC 2004) to the situation, and the threat presented by neo-liberal economic globalisation is:

Speaking from our Reformed tradition and having read the signs of the times, the General Conference of the Alliance of Reformed Churches affirms that global economic justice is essential to the integrity of our faith and our discipleship as Christians. (p. 2)

This statement is further strengthened by the following commitment (WARC 2004):

We believe that God is a God of justice [...] God calls for just relationships with all creation [...] We stand against any form of injustice in the economy and the destruction of the environment, 'so that the righteous shall roll down like waters, and righteousness like an ever-flowing stream' (Am 5:24). (p. 3)

Although there are a few brief references to what can be described as an eschatological approach to mission in Lausanne III does not focus in detail on this orientation. However, in the discussion on the earth we live on (2011:13) does refer to God's redemptive purpose for all creation. The conclusion (Lausanne III 2011) states:

So we love the world in holy longing for the redemption and renewal of all creation and all cultures and the ingathering of God's people from all nations to the ends of the earth, and the ending of all destruction and enmity. (p. 15)

TTL departs from a Trinitarian point of view, and understands the life-giving mission of God as a renewal of creation (Keum 2013:4): 'Eco-justice cannot be separated from salvation, and salvation cannot come without a respect for the needs of all life on earth' (Keum 2013:11). As the whole *oikoumene* is interconnected in God's ultimate restoration of life includes all of creation. The 'church is a gift of God to the world for its transfiguration in the kingdom of God. Its mission is to bring new life and announce the loving presence of God in our world'.

TTL has a particular pneumatological focus, and describes the mission of God primarily in terms of the Holy Spirit under four headings: Spirit of mission, Spirit of liberation, Spirit of community, and Spirit of Pentecost. The document affirms that the mission of God's Spirit is to renew the whole of creation (Keum 2013:38). The Holy Spirit brings life in its fullness and brings newness and change to the places and times of our personal and collective existence (Keum 2013:14). The church is the 'eschatological coming together (*synaxis*) of the people of God in God's kingdom and the expression of the kingdom of God, a 'glimpse and foretaste of it' (Keum 2013:9, 21). It must be similar focus: the church manifests the newness of life given by Christ and, in doing so, anticipates the presence of God in the present in him (WCC2013:38).

The very last paragraph of TTL (Keum 2013) concludes:

The Triune God invites the whole creation to the Feast of Life, through Jesus Christ who came 'to give us life, and may have it in all its fullness' (Jn 10:10, REB), through the Holy Spirit who affirms the vision of God: 'Behold, I create new heavens and a new earth!' (Is 65:17, KJV). We commit ourselves together to

and hope to the mission of God, who recreates all and reconciles all. And we pray, 'God of Life, and peace!' (p. 40)

Wrapping up

Ecology is about life. Mission is about the gospel of Jesus Christ. And the gospel is also about life (Life promised by the gospel is life in fullness. This is a reality that is already present in the reign of the kingdom, and this structures and forms the life-giving mission of the church. So, what the church does into God's future (see also Wright 2014:105). As *The Accra Confession* (WARC 2004) so eloquently puts

Now we proclaim with passion that we will commit ourselves, our time and our energy to changing restoring the economy and the earth, choosing life, so that we and our descendants might live (

Conclusion

The way forward in the process of life-giving mission is *discernment*. Kim (2009:34) says discernment is The church, as a community of followers called by the Spirit on a journey of mutual discernment, must be working to be able to join in. Thus, the skill of discernment is the door to new life and the starting-point for faith communities. It calls forward prophets, who proclaim their message on the basis of an act of spirit enables them to visualise the future consequences of a particular way of acting in the present (Conrad the life-giving alternatives of God's life-giving reign. Missiology must extend the claims and realities of the present order (Tennent 2010:loc.5615).

Mission and ecology is about life. Mission and salvation does have ecological dimensions. The polarised end times can be solved in an approach that recognises the important orientation towards creation as the whole of God's household. Faithful discernment opens our eyes to the fact that we do not live in a in one with windows open towards eternity (see also Conradie 2006:165-166) - earth as the *oikodome*

An overview of recent ecumenical documents showed a particular emphasis on the church's mission to the restoration of his whole *oikodomene*. The gospel is all about the restoration of God's rule over all of creation. Pope Francis, we must take charge of this home entrusted to us, so that we can protect and serve it (Francis forward, missiology can contribute to ecodomy by bringing together reflection on creation and the end of This will include missiological reflection on creation theology, social ecology, eco-justice and eco-spi-

1 This research was written against the background and as part of the Faculty of Theology at the University of Cape Town Research Theme 'Oikodome: Life in its fullness'. The concept 'Oikodome' will be discussed and unpacked in the current issue of *Verbum et Ecclesia*, and this research reflects a missiological contribution to the theme of Oikodome.

2 One must mention, however, the early work of Jannie du Preez (*Reading three 'enthronement psalms': wonder and responsibility: Some thoughts on ecology and Christian mission*), Piet Meiring (*The Greens - A Theological Reflection*) and L.D. Hulley (*Justice, peace and the integrity creation: Some ethical comments*), all published in *Missiologia*.

3 The Edinburgh World Mission Conference 2010 also linked social justice issues to ecological justice issues. The cry of the poor is the same as the cry of the earth. Just as the poor buckle under the heavy yoke of unjust economic practices, the earth is buckling under the weight of massive degradation and wanton destruction carried in the name of progress and development. The Edinburgh World Mission Conference 2010 called on churches to become agents of compassion and healing, 'where there is a new zeal for justice, peace, and the protection of the environment'. The liturgy reflecting the beauties of the Creator and creation' (Edinburgh World Mission Conference 2010).
