**Title:** Asteroidal resource opportunities suggested by meteorite data.

**Authors:** [Lewis, J. S.](#) ; [Hutson, M. L.](#)

**Publication:** Resources of near-Earth space, p. 523 - 542

**Publication Date:** 00/1993

**Origin:** [ARI](#)

**ARI Keywords:** Meteorites: Parent Bodies, Meteorites: Chemical Composition, Meteorites: Minor Planets

**Bibliographic Code:** [1993rnes.book..523L](#)

The meteorites that fall on Earth are necessarily samples of the near-Earth population of small solar system bodies, and hence are a very useful guide to the nature of the materials available in near-Earth space. The authors review the compositions of the most abundant classes of noncarbonaceous meteorites that fall on Earth for the purpose of identifying economically attractive uses of near-Earth asteroid materials.
