 **French regional planning.**Author(s) : [HANSEN, N. M.](#)Book : [French regional planning](#). 1968 pp.xvi + 316 pp. ref.Bibl.

Abstract : French regional planning is based on a theoretical framework which distinguishes three types of regions (1) congested, (2) intermediate, and (3) three types of investment for development (a) private for directly productive, (b) public economic expenditure on projects such as roads, harbours and ports which directly support production, and (c) public social expenditure, on education, welfare, etc., aimed at developing human resources. The aim of '*aménagement du territoire*' (environmental planning) is the better distribution of population and natural resources and economic activities on the basis of the welfare and the development of the potentialities of the whole population. The book describes

administrative framework in which local, regional and national public authority representatives of major economic groups co-operate in preparing regional development plans for different economic sectors. The economic structure of the individual region in detail and the highly agricultural nature of many regions in group (3) is examined. The effect of the policy of regional development poles is examined and the type of investment required in regions of types 1, 2 and 3 are discussed. The extent to which population should be encouraged to move out of certain regions is also considered. The extent to which French types of policy might be applied in the USA is examined.
