Book : [Perinatal problems. The Second Report of the 1958, British Perinatal Mortality Survey under the auspices of the National Birthday Trust Fund.](#) 1969 pp.xx + 395 pp.

Abstract : This is the second volume dealing with a survey conducted in 1958

national sample of over 17000 births and an additional 7000 perinatal and late deaths. Additional data have been included and a more detailed analysis has been included than in the preceding volume, and the results have been presented in 16 chapters by 16 authors in addition to the 2 editors have contributed individual chapters on various aspects of perinatal mortality in which they have a special interest and know the data. The data have been studied in considerable detail and the discussion has been written in a readable and informative style. This report will be a source of reference to workers in this subject for some time but workers may find some difficulties in making comparisons. The data are sometimes illustrated by bar diagrams without tables from which they were constructed. In some instances the diagrams are given in figures rather than the tables and the recovery of the actual numbers from the diagrams, becomes impossible. In the chapter on malformations the associated defects of conditions are shown by small coloured oblongs. This is an ingenious method of attempting to give a pictorial representation of a complex distribution but of little use since the recovery of the actual distributions for comparative purposes is tedious and uncertain.

This report identifies the categories of high risk pregnancies and suggests steps that can be taken to minimize the risk in this group of mothers. The need for further work on many aspects of the problem and for the constant review of perinatal mortality is stressed in order to check how the advances in practice and the changes in administration of maternity services are affecting the infant. Everyone connected with maternal or child welfare will find this comprehensive and interesting. The medical, obstetric, socio-economic and geographical problems interesting and thought-provoking. *W. J. Martin.*
