Effect of Artificial Dyeing on Ornamental Value and Vase Life in Cut I
[Byun, Mi-Soon; Kim, Jae-Wang; Kim, Kiu-Weon;](#)

[Abstract](#)

The study was conducted to find out optimum dying condition of artificia
of dyeing state depended on dyeing time and temperature. Higher tempe:
Temperature of dyeing treatment at 25°C and dipping time for 60 minute
Moreover, measurement of absorption density for change of artificial pig
result, petal was not damaged physically and also vase life was not affecte
able to be used as processed goods of cut flowers.

Keywords

preference;light absorption spectrum;
