

Virtual Lab: A virtual machine management system

Adjaho, Mohamed Kessir

URI: <http://hdl.handle.net/20.500.11988/237>

Date: 2014-04

Abstract:

Virtual Lab is a virtual machine management system that seeks to streamline the process of creating, deploying virtual machines onto a set of computers. Many universities already use virtualization to enable computer science students to do practical work. In some of these universities, the deployment management of virtual machines is done manually. Virtual Lab automates this process so that faculty can focus on more useful tasks.

Description:

Applied project submitted to the Department of Computer Science, Ashesi University College, fulfillment of Bachelor of Science degree in Computer Science, April 2014
