Abstract

Five Psocoptera species: *Lepinotus reticulatus*, *Liposcelis entomophila*, *Liposcelis mendax*, *Liposcelis bostrychophila* and *Liposcelis paeta* were identified on organic paddy stored in south-east Spain. The main natural predator associated with the psocids in the study area was the pseudoscorpion *Withius piger*, reported for the first time within the Iberian Peninsula.
