## [An analysis of linkage in quantitative inheritance.](#)

Author(s) : [Cavalli, L. L.](#)

Book : [Quantitative inheritance. Papers read at a colloquium held at the Institute of Genetics Edinburgh University under the auspices of the Agricultural Research Council, 1950. 1952 pp.135-44 pp.](#)

Abstract : The existence of linkage between the polygenes determining number of abdominal bristles in *Drosophila melanogaster* has been demonstrated by differences between back crosses involving (1) males or (2) females as the parents. Further analysis has provided estimates of the number of chromosomes, the polygenic activity and of the number of polygenes.

Record Number : 19541603514

Publisher : HM Stationery Office.

Language of text : not specified

Language of summary : not specified

Indexing terms for this abstract:

Organism descriptor(s) : Drosophila, Drosophila melanogaster

Descriptor(s) : backcrossing, chromosomes, crosses, inheritance, linkage, polyge

Identifier(s) : quantitative inheritance

Broader term(s) : Drosophilidae, Diptera, insects, Hexapoda, arthropods, invertebrates, eukaryotes, Drosophila
