Le Colloque de Montpellier a représenté la première réunion internationale consacrée aux nombreux problèmes posés par la Photorégulation de la Reproduction, des Oiseaux aux Mammifères et jusqu'à l'Homme.

Les aspects qualitatifs (longueurs d'ondes actives) et quantitatifs (photopériodes naturelles et expérimentales) de cette Régulation, ses composantes circadiennes, ses voies et ses mécanismes neuroendocriniens, la photorégulation de l'ovulation et de la ponte (oviposition), de la migration et de l'hibernation saisonnières, y ont été largement discutés.

Le volume de ce Colloque contient les 26 rapports et les discussions qui y furent présentés.
