The organization and performance of the U.S. food

Author(s) : [Marion, B. W.](#)

Book : [The organization and performance of the U.S. food system.](#) 1986 pp.xxx

Abstract : The book reflects the results of the North Central Regional Research Station (NC 117) on the US food system, as well as research done outside the project. The research followed three general lines of inquiry, which are reflected in the chapters of the book. Firstly, industry studies focus attention on farming (chapter 1), food processing and manufacturing (chapter 4), and food distribution (chapter 5), including food retailing and the away-from-home food market. Secondly, commodity supply and vertical coordination are considered, including how the subsector is organized.

and mechanisms of coordination, how the subsector is changing, and how its organization affects subsector performance. Subsectors covered were: dairy, broiler and egg; wheat, maize and soyabeans; potatoes ;citrus; tart cherry. The legal environment of the food system is examined with extensive documentation and regulations which directly influence the organization and performance of the system, and with intensive examination of several specific areas of law, especially related to antitrust, competitive practices, cooperatives, collective bargaining and safety. The last chapter deals with alternative public and private actions to improve the organization and performance of the food system.
